[AMD Advanced Media Acceleration \(AMA\) SDK](#)

A comprehensive archive of meetings focused on the Android Open Source Project (AOSP) and Android Automotive OS (AAOS). The archive includes slides and videos from various talks, providing valuable insights into Android development and related technologies.

Apple Developer Forums - Media Technologies

Apple's Developer Forums offer a dedicated section for Media Technologies, including streaming. Developers can engage in discussions about HTTP Live Streaming (HLS), AVFoundation, and other Apple media technologies, making it a crucial resource for those developing on Apple platforms.

Atlanta Tech Resources

A curated collection of groups, events, and opportunities for developers in the Atlanta, GA area. This repository serves as a comprehensive guide to active tech meetups, affordable conventions, and networking opportunities, making it easier for developers to connect and collaborate.

Subcategories:

A comprehensive SDK from AMD that provides source codes for various elements of media acceleration, including sample codes, third-party integrations, and utilities. It is particularly useful for developers looking to leverage AMD hardware for efficient video encoding and decoding.

AMD Advanced Media Framework (AMF SDK)

AMD's GPUOpen Video SDK that provides developers access to GPU-accelerated encoding and decoding (H.264, HEVC, etc.) on AMD hardware.

AMF Encoder Developer Guide (Wiki)

Official AMF wiki guide for developers building video codec encoder applications with AMD's Advanced Media Framework SDK — covers encoder component setup, property configuration, and submission/polling workflow. Companion documentation to the AMF SDK repository entry.

AWS SPEKE Reference Server

The Secure Packager and Encoder Key Exchange (SPEKE) reference server by AWS provides a framework for communication between media services and DRM system key servers. It helps developers implement content encryption protection strategies effectively.

AutoVideo

AutoVideo is a Python system designed for automated video action recognition. It features a modular infrastructure, an extensive list of primitives for pipeline construction, data-driven tuners for pipeline optimization, and an easy-to-use graphical user interface. This tool is valuable for developers working on video analysis and understanding tasks.

AviSynth

AviSynth is a powerful scripting-based tool for video post-production. It allows users to process videos through scripts without a GUI, enabling tasks like cutting, trimming, cropping, and applying various filters. AviSynth acts as a non-linear video editor controlled entirely by scripting, making it highly flexible for complex video processing workflows.

AVideo CDN Storage

AVideo offers a CDN Storage solution that automatically replicates video files globally, ensuring low latency and high throughput for video streaming. It provides infinite scalability, strategic positioning of data, and direct CDN integration, making it valuable for developers seeking efficient content delivery.

AWS CDN Video Streaming Service

This project leverages Amazon S3, Amazon CloudFront, and React to build a scalable and efficient video streaming service. It allows users to view a variety of streaming content through a web-based interface, ensuring optimized security, performance, and reliability through AWS's global network of data centers.

AWS Elemental Media Services

AWS Elemental Media Services offer a suite of cloud-based solutions for video processing and delivery, including live and on-demand streaming. These services enable scalable, secure, and cost-effective video workflows, making them valuable for developers building video streaming and encoding applications.

A Brief History of Video Coding

Authored by Marco Jacobs and Jonah Probell, this document provides a detailed account of the history of video coding. It discusses early forms of compression, the development of interlacing, and the progression of video coding standards. This resource is useful for those interested in the technical aspects and historical context of video coding.

A Brief History of Video Compression Standards: 1929 to 2020

An article by Moment For Technology that provides a concise history of video compression standards, covering key developments from 1929 to 2020.

A Comprehensive Guide To Develop A Live Video & On-demand Video Streaming App

An extensive guide by RaftLabs detailing the development of live and on-demand video streaming applications, including business use cases, essential features, and technology stacks.

3DLUT Creator

A stand-alone software to create and edit 3D LUTs (Look Up Tables) for color grading. It provides a unique interface for manipulating the color response of images and videos, which can then be applied via LUT in other grading software or on monitors.

4K Media

Uncompressed 4K demos, samples, and trailers, to show off your new ultra-HD (2160p) HDR/HLG/Dolby Vision television or monitor.

Aeneas

Aeneas is a Python library and command-line tool for automating the synchronization of audio and text (forced alignment). It can be used to align subtitles with audio tracks, making it useful for developers working on video streaming and encoding projects that require precise subtitle timing.

AVPlayer

AVPlayer is Apple's framework for playing and streaming audio and video content on iOS and macOS. It supports a variety of formats and provides developers with a powerful API to control playback, manage buffering, and handle interruptions, making it a fundamental tool for media playback in iOS applications.

Advantech Video Solutions

Advantech offers a range of industrial-grade video solutions, including high-quality, real-time video transmission systems with UHD resolutions and low latency. Their VEGA series supports various protocols, aiding in broadcasting, mobile, gaming, and medical

100ms: RTMP vs WebRTC vs HLS - Live Video Streaming Protocols Compared

A detailed comparison of RTMP, WebRTC, and HLS protocols, highlighting their differences in latency, scalability, quality, and reach. This resource assists developers in choosing the appropriate protocol based on their specific live video streaming requirements.

Ad Creative Signaling in DASH and HLS

This project by the Streaming Video Technology Alliance defines a data scheme for signaling advertisement creative assets within DASH manifests and HLS playlists, facilitating better ad integration in streaming workflows.

applications, accelerating the deployment of next-generation media solutions.

Agora Video SDK for Android

Agora provides open-source sample projects demonstrating the implementation of basic and advanced Video SDK features for Android. These samples help developers integrate video calling and live streaming functionalities into their applications, leveraging Agora's global real-time communication network.

AV1 Video Codec

AV1 is an open-source, royalty-free video codec developed by the Alliance for Open Media, which includes companies like Amazon, Netflix, Google, Microsoft, Cisco, and Mozilla. AV1 is approximately 30% more efficient than HEVC and VP9, significantly reducing bandwidth and delivery costs. It is suitable for both low-latency streaming and 4K content, with growing adoption in both OTT and real-time applications.

AVIXA AV Standards

AVIXA is the leading resource for AV standards, providing standards that define processes and requirements to promote reliable performance of AV systems. These standards can increase competitive advantage by supporting technology design and procedures that focus on reliability, competency, and success.

AVstandards

AVstandards is a collaborative collection of audiovisual file standards and technical documents. It serves as a valuable resource for professionals involved in audiovisual and digital preservation, offering access to various standards and supporting documents.
