AMD Advanced Media Acceleration (AMA) SDK

https://amd.github.io/ama-sdk/latest/git_hub.html

A comprehensive SDK from AMD that provides source codes for various elements of media acceleration, including sample codes, third-party integrations, and utilities. It is particularly useful for developers looking to leverage AMD hardware for efficient video encoding and decoding.

AMD Advanced Media Framework (AMF SDK)

<https://github.com/GPUOpen-LibrariesAndSDKs/AMF>

AMD's GPUOpen Video SDK that provides developers access to GPU-accelerated encoding and decoding (H.264, HEVC, etc.) on AMD hardware.

AMF Encoder Developer Guide (Wiki)

<https://github.com/GPUOpen-LibrariesAndSDKs/AMF/wiki/Guide-for-Video-CODEC-Encoder-App-Developers>

Official AMF wiki guide for developers building video codec encoder applications with AMD's Advanced Media Framework SDK — covers encoder component setup, property configuration, and submission/polling workflow. Companion documentation to the AMF SDK repository entry.

AV1 vs HEVC – Bitmovin Compression Efficiency Results

<https://bitmovin.com/av1-showing-greater-compression-efficiency-than-hevc/>

A Bitmovin blog post that discusses internal testing results comparing AV1 and HEVC encoders. It provides charts and analysis of bitrate savings, encoding speed, and visual quality, contributing practical data to the conversation about next-gen codec adoption.

Adobe Media Encoder

<https://www.adobe.com/products/media-encoder.html>

Adobe Media Encoder is a professional video encoding software that integrates seamlessly with Adobe's suite of creative tools. It supports a wide range of formats and offers features like batch processing, GPU acceleration, and preset templates, making it ideal for high-quality video encoding tasks.

Alliance for Open Media (AOMedia)

<https://aomedia.org/>

An industry consortium that develops open, royalty-free media formats. AOMedia created the AV1 video codec and works on related audio/image formats and tools.

Android - Video - Trimmer

<https://github.com/iknow4x/Android-Video-Trimmer>

An Android project that implements video trimming functionality using MediaMetadataRetriever to obtain video frames and FFmpeg for video cropping and compression.

Ateme TITAN

<https://www.ateme.com/products/titan/>

Ateme TITAN is a software suite designed for video origination, acquisition, and compression. It offers high-quality encoding solutions suitable for various applications, including broadcasting and OTT services.

Beamr Content - Adaptive Bitrate Encoding

<https://www.encoding.com/media-services-overview>

Beamr's Content-Adaptive Bitrate (CABR) technology is integrated into Encoding.com's platform, allowing for streaming video with the highest possible picture quality while reducing bitrate by up to 50%. This technology is valuable for efficient video delivery and storage.

Bento

<https://github.com/bento-video/bento>

Bento is an open-source, high-speed serverless video transcoding pipeline designed for deployment on Amazon Web Services (AWS). It offers a fast and simple solution for individuals and small businesses needing efficient video transcoding capabilities.

Bitrate Viewer

<https://www.winhoros.de/docs/bitrate-viewer/>

Bitrate Viewer is a free Windows application that allows users to analyze the bitrate of H.264 encoded video files. It provides a graphical representation of bitrate distribution, aiding in the assessment of video quality and encoding efficiency.

CineForm SDK

<https://gopro.github.io/cineform-sdk/>

GoPro's CineForm codec SDK, open-sourced, providing tools and libraries for the CineForm HD wavelet-based video codec used for high-fidelity video compression.

Cisco Thor Video Codec

<https://tools.ietf.org/html/draft-fuldseth-netvc-thor-00>

Thor was an experimental video codec developed by Cisco as a candidate for the NETVC (Next-Gen Video) initiative. While Thor itself is not used as-is, some of its technology contributed to the development of AV1. It's a piece of codec research history with source available for study.

CompressAI

<https://arxiv.org/abs/2011.03029>

CompressAI is a PyTorch library and evaluation platform for end-to-end compression research. It provides custom operations, layers, models, and tools to research, develop, and evaluate image and video compression codecs. CompressAI includes pre-trained models and evaluation tools to compare learned methods with traditional codecs, facilitating advancements in compression technology.

CrafyVideoJS

<https://github.com/chijete/CrafyVideoJS>

CrafyVideoJS is a lightweight, hardware-accelerated JavaScript library that enables in-browser manipulation, decoding, and encoding of MP4 H.264 (AVC) videos. It leverages the browser's VideoEncoder and VideoDecoder APIs along with mp4box.js to provide efficient video processing without server-side support. Features include video trimming, bitrate adjustment, resolution changes, and metadata extraction.

DivX Converter

<https://www.divx.com/en/software/converter/>

DivX Converter is a video encoding software that allows users to compress and convert video files into the DivX digital format, known for its high-quality output and efficient compression.

Dolby Vision Professional Decoder Plugin

https://github.com/DolbyLaboratories/dolby_vision_professional_decoder_plugin

DolbyLaboratories/dolby_vision_professional_decoder_plugin - A GitHub repository for video/multimedia development

FFmpeg

<https://ffmpeg.org>

FFmpeg is a free and open-source software project consisting of a suite of libraries and programs for handling video, audio, and other multimedia files and streams. It is widely used for format transcoding, basic editing, and standards compliance.

FFmpeg Docker Container

<https://github.com/tamara-schmitz/ffmpeg-docker-container>

This project provides a Docker container for FFmpeg, facilitating the use of FFmpeg in isolated environments. It simplifies the deployment and execution of FFmpeg commands, ensuring consistency across different systems and easing the setup process for developers.

FFmpeg iOS

<https://sourceforge.net/projects/ffmpeg-ios/>

FFmpeg iOS provides precompiled FFmpeg libraries tailored for iOS development. These libraries enable developers to incorporate robust video processing capabilities into iOS applications, supporting a wide range of codecs and formats essential for video streaming and encoding tasks.

FastPix Cloud Transcoding

<https://www.fastpix.io/blog/cloud-transcoding-choosing-the-right-solution-for-your-video-centric-product>

FastPix provides a cloud-based transcoding solution that converts video files into multiple resolutions, bitrates, and formats optimized for playback across devices and networks. Key benefits include scalability to handle peak traffic, cost-efficiency with pay-as-you-go models, and accessibility through powerful APIs for automation and dynamic workflows. FastPix supports modern codecs like AV1 and legacy ones like H.264, ensuring compatibility across various platforms.

Gmmlib

<https://github.com/intel/gmmlib>

Intel/gmmlib - A GitHub repository for video/multimedia development.

H.264 Profiles and Levels

<https://blog.mediacoderhq.com/h264-profiles-and-levels>

Explains H.264 encoding profiles and levels, helping developers choose appropriate settings for compatibility and quality.
